Summary

Computer Science undergraduate with experience in scalable web applications and cloud-based intelligent systems. Skilled in backend optimization, real-time system design, and full-stack development using React, Node.js, and MongoDB.

Education

Indian Institute of Information Technology, Sri City
B.Tech — Computer Science and Engineering

CGPA: 7.6

Projects

Hotel Rooms Booking System (GitHub)

- Built a full-stack hotel booking platform with authentication, search, booking, and real-time availability tracking.
- Designed optimized MongoDB schemas for users, rooms, and bookings ensuring efficient data handling.
- Implemented dynamic admin dashboard with booking analytics and inventory updates.

Real-Time Chat Application (GitHub)

- Developed a full-stack real-time chat platform with secure authentication, private messaging, and live online status tracking.
- Integrated Socket.IO for instant messaging, typing indicators, unread message counts, and seamless real-time communication.
- Designed a responsive modern UI with profile image uploads, recent chats system, and dynamic message handling.

Fashion Ecommerce Platform (GitHub)

- Developed a full-stack fashion ecommerce platform with customer, vendor, and admin modules supporting authentication, product management, cart, wishlist, and secure checkout.
- Implemented Razorpay payment integration, OTP-based authentication, order tracking, inventory management, and size-wise stock handling for real-time purchase validation.
- Built responsive admin and vendor dashboards with analytics, product approval workflows, customer management, and order status monitoring.

Technical Skills

- **Languages:** C, Java, Python, JavaScript.
- **Web Technologies:** HTML, CSS, React.js, Next.js, Node.js, Express.js, Redux, GraphQL.
- **Databases:** MongoDB, MySQL, PostgreSQL.
- **Tools:** Git, AWS, Pandas, NumPy, Matplotlib, Docker.
- **Coursework:** DSA, Operating Systems, DBMS, Computer Communication Networks, Computer Architecture, Machine Learning, Deep Learning.
